Subject: RE: Weekly RM 10.9 Removal Action Status Review

The river actually looks calmer this morning. I wonder if that is due to less drainage from the Saddle River and other outfalls downstream of a Dundee Dam. We'll discuss this afternoon if they will be able to try fabric placement tomorrow even if the Dundee flow is above 3000 cfs.

Today they have just finished removing rock from the area south of the NDZ. They were supposed to be repairing the active layer there and then doing some coring. Ben is out with Roy and I'll get a report from them shortly.

Stan,

The weekly summary looks fine. Glad to see that the turbidity issues have settled due to the new equipment.

Thank you also for the survey. I see that the near shore areas are the primarily low N20 and north. I also noticed the flow is again at almost 5000cfs, so I'd assume these low areas will continue to be addressed until the flow slows at some point?

Talk to you soon.

Mike

In preparation for this teleconference, attached are:

1. Draft minutes of last week's teleconference
 2. A proposed Agenda for this teleconference
 3. An updated figure showing a revised panel layout just north of the No Dredge Zone
 4. Results of a recent survey of the armored area
 5. A proposed status report for the www.rm109.com website
- Hope you all have time to take a look before the call.
